

Genealogy and Ontology of the Western Image and its Digital Future (Routledge Advances in Art and Visual Studies)

With the emerging dominance of digital technology, the time is ripe to reconsider the nature of the image. Some say that there is no longer a phenomenal image, only disembodied information (0-1) waiting to be configured. For photography, this implies that a faith in the principle of an evidential force of the impossibility of doubting that the subject was before the lens is no longer plausible. Technologically speaking, we have arrived at a point where the manipulation of the image is an ever-present possibility, when once it was difficult, if not impossible. What are the key moments in the genealogy of the Western image which might illuminate the present status of the image? And what exactly is the situation to which we have arrived as far as the image is concerned? These are the questions guiding the reflections in this book. In it we move, in Part 1, from a study of the Greek to the Byzantine image, from the Renaissance image and the image in the Enlightenment to the image as it emerges in the Industrial Revolution. Part 2 examines key aspects of the image today, such as the digital and the cinema image, as well as the work of philosophers of the image, including: Roland Barthes, Walter Benjamin, Gilles Deleuze, Jean-Paul Sartre and Bernard Stiegler.
